HTML Cheat Sheet

`<p>` - Used for placing text into. Place each **p**aragraph into a new p tag.

`<img src="path/to/image" />` - Used for displaying images. The text which goes into the src attribute is the path to the image. If it is an image on a website make sure to use the full path including the http:// If it is an image you created and is in the same directory as the html file then just use "./myfile.png"

`<h1>` - Used for displaying a large heading
`<h2>` - Used for displaying a slightly smaller heading
......
`<h6>` - Used for displaying the smallest heading

`<a href="`http://example.com`">My Link</a>` - A link to example.com which has the text "My Link". Remeber that these should also use the http:// in the href attribute.

`<b>` - Used for making text bold, but outdated. The prefered method is to use a `<span>` tag and set the style attribute of it as follows: `<span style="font-weight:bold;">My Bold Text Here</span>`
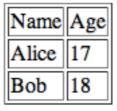

`<u>` - Similar to the bold tag, but it underlines text instead. As before you should now use a span tag with the style as "text-decoration: underline;".

`<i>` - Similar to the bold tag again, but it makes text italic. As before you should now use a span tag with the style as "font-style: italic;"

`<table>` - Used for creating a table

`<tr>` - Used for creating a row in a table

`<td>` - Used for creating a cell in a table.

Example:

```
<table border="1">
     <tr>
          <td>Name</td>
          <td>Age</td>
     </tr>
     <tr>
          <td>Alice</td>
          <td>17</td>
     </tr>
     <tr>
          <td>Bob</td>
          <td>18</td>
     </tr>
</table>
```

Name	Age
Alice	17
Bob	18

\<ul\> - Unordered (bulleted list)
\<ol\> - Ordered list (numbered list)

\<li\> - List element

Example:

```
<ul>
     <li>List element 1</li>
     <li>List element 2</li>
     <li>List element 3</li>
     <li>List element 4</li>
</ul>
```

Creates:

- List element 1
- List element 2
- List element 3
- List element 4
